Claims 15-38 are presented for examination.

Applicant's preliminary amendment filed May 22, 2002 and the information disclosure statement filed October 1, 2002 have been received and entered.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 15-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chase et al. (U).

Chase et al. teach angiotensin-converting enzyme inhibitor treatment for young normotensive diabetic subjects: a two-year trial. Note the angiotensin-converting enzyme inhibitors improved the eye grade of the two subjects thus improving the visual acuity of the subject. Clearly, the cited reference teaches the applicant's instant invention.

The instant invention differs from the cited reference in that the cited reference does not teach the applicant's preferred inhibitors of claim 20. However, one skilled in the art would have assumed the Chase et al. reference states that all angiotensin-converting enzyme inhibitors, including ramipril and ramiprilat are effective to improve visual acuity in the absence of evidence to the contrary.

The instant invention differs from the cited reference in that the cited reference does not teach effective dosage of the ACE inhibitor administered to the subject as disclosed in claims 22-24. However, one skilled in the art would have determine a dosage having optimum effectiveness against various ocular disorders to maintain and improve visual acuity is well within the level of one having ordinary skill in the art, and the artisan would have been motivated to determine an optimum dosage to get the maximum effectiveness of the ACE inhibitors.

Claims 15-38 are not allowed.
